

OCT-SSRet: Hybrid Swin-Transformer + Mamba-Style Selective State-Space Bottleneck for OCT Disease Classification

Empirical operating profile

Essentially neutral in-domain on Kermamy 2017 (matches Swin-V2-T baseline). Improves zero-shot cross-cohort transfer to OCTID at zero retraining cost. Pure-PyTorch SSM (no custom CUDA), portable across GPUs incl. Blackwell sm_120.

Solid arrow: forward + backward gradient flow. Green box (SSM) = headline architectural contribution.
